Objective:

This Project is about my personal blogging.

For all my previous blogs, I want to extract all previous blogs from https://mrmohan.blogspot.com and post them in a new web page only once.

I would like to manage the website via Github new repository called "Personal_Blogs" and eventually post it to through vercel.

Blog Format:
[ ] You can use your creativity to reflect a simple personal blog format
[ ] initiative for navigation
[ ] I want to see how many users reaching reading the blog on daily basis
[ ] track the audience geo locations
[ ] Give option to provide comments for each blog

For Initial Creation:
[ ]Create a Github repository called "Personal_Blogs"
[ ] Old blog posts: Import all blogs posts from https://mrmohan.blogspot.com
[ ] Make a backup of all my old blogs from above web page into "Old Blogs" folder
[ ] Make sure old blog spots titles, creation date & times are preserved
[ ] Main blog name will be the same https://mrmohan.blogspot.com
[ ] Arrange all my old blogs in the new website in the same order

Quality Review:
[ ] Do not commit any blogs without grammatical review
[ ] Make sure fonts, sizing and colors are consistent

For new Blogs:
[ ] Make sure you take the latest blog from my latest blogs folder
[ ] Keep Checking the latest blogs folder for any changes sync changes to the blogs
[ ] Preserve pictures and sub-titles for the pictures

Output:
Publish Static website for blogs
Test the final Versil
